

## How to measure for stone countertops

### Tools you will need

You will need a pen or pencil, a ruler, a tape measure and paper

\* Use graph paper included in this guide.

### Drawing your countertops

1. Begin by drawing the basic shape of your existing cabinets or countertops.
2. Draw the location of the sink.
3. Draw the location of your cooktop, freestanding or slide-in stove and refrigerator.
4. Mark with (F) all exposed edges that need to be finished.
5. Mark with (A) all edges that butt up against appliances such as refrigerators and stoves.
6. Mark with (U) all edges that will have no finish or edges against walls.

## How to measure for stone countertops

### Measuring your countertops

When measuring your cabinets or countertops, always measure in inches.

The sink will be undermounted

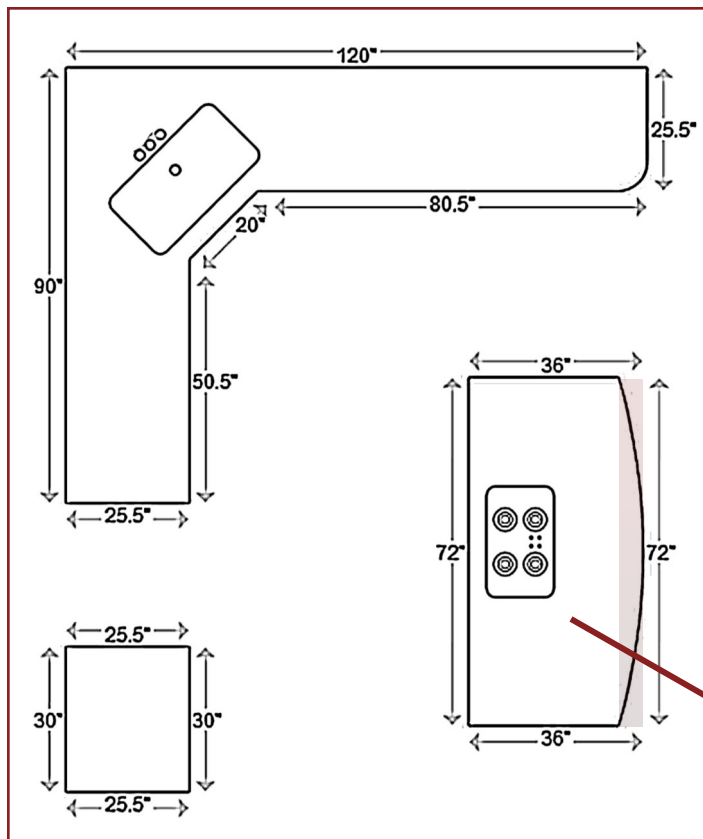

The sink will be a drop in

Yes, I want backsplash

I want a stone backsplash

I want a Tile backsplash

Note: Typical stone backsplash height is 4" while tile backsplashes usually start at the countertop and end at the bottom of the upper cabinets.

1. Measure the length of your existing countertops along the wall from one edge to the opposite edge.
2. Measure the width of your existing countertops from the back wall to the finished front.
3. If measuring cabinets without any existing countertops, measure the exact dimensions of your cabinets adding 1-1/2 inches for overhang wherever there will be a finished edge.

All rounded pieces should be measured as if they were rectangular. As in the case of this Island, measure total length by total width to get 72 inches by 36 inches.
